That's called the Software Update service Apple also has a service called Caching, now built into all client operating systems.. If the Software Update packages being applied affect the Web service (usually Mac OS X Server updates & security updates), yes, I'd expect the Web service to be unavailable during the installation & restart steps, but up during the download step.. Mac OS X Server should restore the state of the Web service to 'Running' upon a reboot if it had to.. The service in the Server app is known as Software Update and from the command line is known as swupdate.
